Bioterrorism Preparedness Training Program Update – July 2002
By: Sunny Lucia, MPH

The challenge of preparing for and responding to a biological event is significant. Unlike the events of September 11, 2001 or other acts of violence, a bioterrorism event may be covert and difficult to identify until the disease has spread and infected many people. Therefore, the sooner the Health District is notified of unusual occurrences of illness or an unexpected increase in the number of persons presenting with a disease, the sooner a response can be initiated.

The Clark County Health District Office of Epidemiology Bioterrorism Preparedness Training Program (BPTP) was established in cooperation with the Southern Nevada Health Education Center (AHEC), to provide healthcare professionals with information on potential agents and to reinforce their role as “first recognizers”. The two-hour training course offered by the BPTP covers awareness of the potential for bioterrorism in our community, information about disease reporting and surveillance systems, preparedness, and protocols for the medical management of six biological agents of concern: anthrax, tularemia, botulism, viral hemorrhagic fever, smallpox and plague. Training sessions have been conducted since October, 2001 in hospitals and clinics, at medical conferences, the Las Vegas Fire Academy and business executive meetings. The number and type of professionals who have received training through BPTP is shown in the table below.

TABLE 1
BPTP TRAINING SUMMARY

<table>
<thead>
<tr>
<th>Number Trained</th>
<th>October 2001– June 2002</th>

The commentary on the following page illustrates the successful collaboration between the BPTP and an important community agency:
How Are We Going to Know
If We Have A Bioterrorist Event in Las Vegas?
By: Mike Myers, Assistant Chief
Las Vegas Fire Rescue

For the past 9 months, the Bioterrorism Preparedness Training Program (BPTP) at Clark County Health District Office of Epidemiology (OOE) has worked closely with Las Vegas Fire Rescue (LVFR) to educate first responders and emergency room professionals about their role in bioterrorism. It’s an important role; one that BPTP calls “First Recognizers.” We don’t expect a bioterrorist event to be obvious, which means first responders need to be able recognize subtle changes in what is going on around them. Here are a few of the clues to early recognition that are taught in the BPTP training course:

- Clusters of patients ill from a single location
- Unusual numbers of sick or dying people presenting for care
- Patients who have flu symptoms and it’s not flu season
- Atypical characteristics in a patient, i.e. an otherwise healthy individual who has no immunological compromise, presents with a rapidly progressive respiratory illness

At LVFR we encourage our emergency medical technicians and dispatchers to have heightened alertness for these clues, and that effort is paying off. Several weeks ago one of our dispatchers called OOE because she noticed several ambulance runs from the same location – clue #1. This turned out to be the early identification of a disease outbreak, and OOE was notified as it was happening. The outbreak was managed quickly and effectively, thanks in large part to the role of a “First Recognizer.” We all need to work together and learn that this increased vigilance is not just for the moment, but the key role in bioterrorism surveillance. Remember, “When You See Unusual, Think Outbreak!” and call OOE.

When You See Unusual
Think Outbreak!

For information on training sessions, contact:
Paul Quiroz @ AHEC: 320-4407.
For further information on BPTP, call
Sunny Lucia, MPH, Program Coordinator: 942-9261.
Please take a moment to answer these questions about our newsletters, and then fax the completed questionnaire to (702) 383-4936. Thank you.

Circle the appropriate answer(s):

1. Please indicate your occupation:
   - M.D.
   - D.O.
   - Nurse
   - EMT
   - Office Staff
   - Other

2. Do you read the newsletters?  Yes  No

3. If your answer to “2” was “No”, please indicate your reasons:
   ________________________________________________________________
   ________________________________________________________________

If your answer to “2” was “Yes”, please answer the questions below:

4. Is the subject matter:
   - Interesting  Yes  No
   - Useful  Yes  No
   - Well written  Yes  No

5. What improvements would you suggest? ___________________________________
   ________________________________________________________________

6. What topics would you like to see in future issues? _________________________
   ________________________________________________________________

If more than one person in your office reads these newsletters, please copy this page before filling it out and distribute it to all readers. Your time and effort is greatly appreciated.
