Patient Isolation Precautions

Standard (Universal) Precautions
- Wash hands after patient contact.
- Wear gloves when touching blood, body fluids, secretions, excretions and contaminated items.
- Wear a mask and eye protection, or a face shield during procedures likely to generate splashes or sprays of blood, body fluids, secretions or excretions
- Handle used patient care equipment and linen in a manner that prevents the transfer of microorganisms to people or equipment.
- Use care when handling sharps and use a mouthpiece or other ventilation device as an alternative to mouth-to-mouth resuscitation when practical.

Standard (Universal) precautions are employed in the care of ALL patients

Airborne Precautions
Standard (Universal) Precautions plus:
- Place the patient in a private room that has monitored negative air pressure, a minimum of six air changes/hour, and appropriate filtration of air before it is discharged from the room.
- Wear respiratory protection when entering the room.
- Limit movement and transport of the patient. Place a mask on the patient if they need to be moved.

Conventional Diseases Requiring Airborne Precautions:
Measles, Varicella, Pulmonary Tuberculosis

Biothreat Diseases Requiring Airborne Precautions:
Smallpox

Droplet Precautions
Standard (Universal) Precautions plus:
- Place the patient in a private room or cohort them with someone with the same infection. If not feasible, maintain at least 3 feet between patients.
- Wear a mask when working within 3 feet of the patient.
- Limit movement and transport of the patient. Place a mask on the patient if they need to be moved.

Conventional Diseases Requiring Droplet Precautions:
Invasive Haemophilus influenzae and meningococcal disease, drug-resistant pneumococcal disease, diphtheria, pertussis, mycoplasma, GABHS, influenza, mumps, rubella, parvovirus.

Biothreat Diseases Requiring Droplet Precautions:
Pneumonic Plague.

Contact Precautions
Standard (Universal) Precautions plus:
• Place the patient in a private room or cohort them with someone with the same infection if possible.
• Wear gloves when entering the room. Change gloves after contact with infective material.
• Wear a gown when entering the room if contact with patient is anticipated or if the patient has diarrhea, a colostomy or wound drainage not covered by a dressing.
• Limit the movement or transport of the patient from the room.
• Ensure that patient care items, bedside equipment, and frequently touched surfaces receive daily cleaning.
• Dedicate use of non-critical patient care equipment (such as stethoscopes) to a single patient, or cohort of patients with the same pathogen. If not feasible, adequate disinfection between patients is necessary.

Conventional Diseases Requiring Contact Precautions:
MRSA, VRE, *Clostridium difficile*, RSV, parainfluenza, enteroviruses, enteric infections in the incontinent host, skin infections (SSSS, HSV, impetigo, lice, scabies), hemorrhagic conjunctivitis.

Biothreat Diseases Requiring Contact Precautions:
Viral Hemorrhagic Fevers, Smallpox.
