

Health cards are so last year.

Adult Group Care Employees

Even though you are no longer required to get a health card, Nevada law* still requires adult group care employees to get screened for tuberculosis.

Because the health district does not offer TB screening, you need to visit your primary care doctor or a clinic that offers TB testing. (Download a list of clinics that offer TB testing at <http://www.southernnevadahealthdistrict.org/download/health-cards-tb-testing-locations.pdf> or visit one of our public health centers for a handout.)

While vaccinations are no longer required, we recommend you keep vaccinations current to protect yourself, your clients and your family.

**Nevada Administrative Code 441A.375*
