3.	Total number of rooms that car	n be occupied overnight (e.	g., patient rooms, occupant rooms, notel rooms) :						
4.	Total overnight occupant capacity:								
5.	Average occupancy over previous 12 months as a percentage of total capacity:								
6.	If occupancy varies throughout	the year, indicate seasons	with highest occupancy (circle all that apply):						
	Spring S	Summer Winter	Fall						
7.	Are any occupant rooms taken	out of service during speci	fic parts of the year, e.g., low season? If yes, indicate which rooms						
8.	Average length of stay for occu	ıpants ( <i>Circle one</i> ):							
	a. 1 night								
	b. 2-3 nights								
	c. 4-7 nights								
	d. >7 nights								
9.	Owner of facility is (Circle one)	:							
	Private individual(s)	Corporation	Other						

10. Description of <u>each</u> building that shares water or air systems with the facility (and including the main facility):

Building Name	Original Construction	Later Construction (renovation, expansion)	Stories	Sq. feet	Occupant rooms*	Census (yr. avg.)	Use List all types of uses
List main facility building first	Year Completed	From/To or N/A	#	Ft <sup>2</sup>	# or NA	#/day or NA	e.g., occupant rooms, utilities, heating/AC plant, potable water
1.							
2.							
3.							
4.							
5.							
6.							
7.							
*Occupant room is defined	1 1 1		-1-11			Lucius	

<sup>\*</sup>Occupant room is defined as a room that can be occupied overnight such as a patient room or a hotel room.

11.	Can windows in any occupant rooms be opened? Yes No
	a. If only some occupant rooms have windows that can be opened, what is the overall proportion of occupant rooms
	with windows that can be opened?
12.	Are there decorative fountains, misters, water features, or any other aerosol-generating devices anywhere on the facility premises?
	Yes No
	If yes, please describe and indicate their location and operation
13.	Has this facility been associated with a previous legionellosis cluster or outbreak? Yes No
	If yes, please describe (e.g., number of cases, dates):
14	Does the facility have a <i>Legionella</i> prevention or monitoring program?  Yes  No
	If yes, please describe
	,,
Out	tside water supply
1.	What is the source of the water used by the facility?
	[Check all that apply]
	Municipal water
	Well
	Other
If fa	acility is served by municipal water, please answer the remaining questions, otherwise skip to section C.
2.	Name of supplier
3.	How is municipal water disinfected? (Circle one)
	Chlorine Monochloramine No residual disinfectant Other
4.	Has treatment of municipal water changed in the last six months? Yes No
	If yes, specify

B.

C.		Design of the existing potable water system(s) [Note: A schematic diagram on a separate page and facility blueprints are									
		onstrating the design]:									
			r the potable hot water system?								
	[Check all t										
		stantaneous heaters without	-								
		eaters with hot water storage									
		ther [ <i>Please describe</i> ]									
_	2. How is the I	hot water system configured	I to deliver water to each buildin	g?							
_	Building name	Type of system (I=Instant H=Heater/boiler)	Name of system (e.g., Boiler #1, Loop #1)	Date of installation	Total capacity (gallons)	Usual temperature setting (°F/°C)					
-											
-											
L	3. Is there a re	ecirculation system (a syster	n in which water flows continuo	Lusly through the pipi	ng to ensure cons	tant hot water to all					
endpoints) for the hot water? Yes No  If yes, please describe (including delivery and return temperatures):											
	4. What is the	maximum hot water temper	rature at the point of delivery per °C	rmitted by state / loca	al regulations?						
	5. What are th	e lowest documented hot v	water temperatures measured a	t any point within the	facility?						
	When were	When were these measurements made (Month/Date/Year)?/									

6.	What are the highest documented cold water temperatures measured at any point within the facility?
	°F or °C
	When were these measurements made (Month/Date/Year)?/
7.	Are thermostatic mixing valves used anywhere in occupant areas? Yes No  If yes, where? Please describe
8.	Does the facility have a water softener on site? Yes No  If yes, please describe (including routine service)
9.	Are the potable water chlorine levels measured? Yes No  If yes, how often?
Please d	If yes, what is the range of residuals in each system

10. Measured parameters:

The following page includes a table for documenting the physical/chemical characteristics of the potable water system. Before performing these measurements, it is useful to plan a sampling strategy that incorporates all central hot water heaters/boilers and various points along each loop of the potable water system. For example, if the facility has one loop serving all occupant rooms, an occupant room near (proximal) the central hot water system and another at the farthest point (distal) of the loop should be sampled. Also, if there are aerosol-generating devices (e.g., misters, decorative fountains) that are not located in occupant rooms, these should also be assessed. Because Legionella amplifies in warm (25-42°C), stagnant water, it is useful to document temperatures, chlorine residuals, and pH in hot potable water.

Recommended procedure for measuring physical/chemical characteristics

For each sampling point (e.g., tap in an occupant room):

- a. Turn on the hot water tap. Collect the first 50cc from the tap. Measure the temperature, pH, and chlorine residual. Document the findings in the table on the following page.
- b. Allow the hot water tap to run for 2-3 minutes. Collect 50cc and measure the temperature, pH, and chlorine residual. Document the findings in the table on the following page.

## Measured parameters

Copy from table for question C-2		Area of system (Central heater/ boiler=C; proximal					
Building name	Name of system (e.g., Boiler #1, Loop #1)	occupant room=P; distal occupant room=D)	Sampling site (e.g., heater #1, tap in occupant room #436)	Type of sample (First, 2- minute)	Temperature (°F/°C)	Chlorine residual (ppm)	рН

n	Whirlpool	snas	χ,	h∩t	tuhs

1. How many total spas and/or hot tubs are located on the premises? \_\_\_\_\_

2. Spa features

Spa number	1	2	3	4
Location				
Max. bather load				
Filter type				
Age of filter				
Filter maintenance routine				
Type of disinfectant used (include				
chemical name, formulation, and				
amount used)				
Method used for adding disinfectant				
Date last drained and scrubbed				

_			
3.	Have any of the spas been "shocked" recen	tly? If so, when and why?	,

## D. Cooling towers and evaporative condensers.

1. Use the following table to list all cooling towers and evaporative condensers on the facility premises:

Name of device (e.g., CT1, EC2)	Manufacturer	Water capacity (gallons)	Tonnage	Type of disinfects / chemicals used & frequency (continuous, daily, weekly, irregular/intermittent)	Drift eliminators used (Y/N)	Location of device	Distance to nearest air intake*/ location of the air intake	Are cooling towers turned off at any time (Y/N)? If yes, include schedule

\*intakes to air handling units (AHUs)

2	Recent (last 6 months	loipogo /s	(non routing)	troatmonto	maintananca	or ronaire to	cooling dovices:
۷.	Recent tiast o month	s) Special	(HOH-FOULINE)	i ireaimenis,	maintenance	or repairs to	coolling devices:

Location	Name of device (e.g., CT1, EC2)	Action taken	Date	Comments
<u> </u>				

		cooling towers and evap		ers?			
4. Does the coolin	ng tower water come	e from a branch of the po	otable water syste	m inside th	ne facility?	Yes	No

E. For recent (last 6 months) or ongoing construction (Summarize the construction activities in the following table):

New Building	Date construction	Relationship to existing potable water system	Date water service	Estimated date of completion	Stories	Sq. feet	Used by occup ants?	Uses  Date occupants began occupying		Floors currently occupied by
Name	began	Independent=I; Extension of existing system=E	began		#	Ft²	Y/N	e.g., occupant rooms, dining, recreation, utilities, heating/AC plant, potable water	building	occupants

1.	Was temporary water so	ervice provided to the new construction area (i.e., separate meter)?
	Yes	No
	If so, describe:	
2.	Has jack-hammering or	pile-driving been used during the construction process?
	Yes	No
	If so, describe (da	ates, location):
3.	If the new building cons	truction includes an extension of the existing potable water system, what part of the new building does the existing potable water system
	serve?	

existing potable water system during the construction been reported? Yes No If so, describe:  Do you have a standard operating procedure (SOP) for shutting down, isolating and refilling/flushing for water service are that have been subjected to repair and/or construction interruptions? Yes No If yes, briefly describe the steps used in the SOP (attached a copy if possible):  Has the potable water changed in terms of taste or color during the construction process? Yes No If so, describe the changes including when the potable water change started and ended:  Have there been any water main breaks, interruptions, or potable water malfunctions in the past 6 months? Yes No a. If "Yes", describe (which buildings were affected, beginning and end dates, etc.):  b. If "Yes", was any soil material introduced into the pipe(s) during these times? Yes No  c. If "Yes", please describe any steps taken to remediate the water.	lf t	the nev	w building co	onstruction includes an extension of the existing potable water system, have disruptions/changes to
