

Public Health Update – 2009 H1N1 Influenza

November 10, 2009

The Southern Nevada Health District reports the following information for the week ending Saturday, November 7.

As of the October 20 report, the Southern Nevada Health District's weekly update reports cumulative 2009 H1N1 influenza case counts since August 31, 2009 to coincide with the national Centers for Disease Control & Prevention and the health district's epidemiology surveillance programs for the 2009-2010 influenza season.

The comprehensive weekly surveillance report is posted at:

Week Ending	Confirmed	Cumulative Cases
November 7	623	2563
October 31	416	1940
October 24	854	1524
October 17	361	670

Clark County 2009 H1N1-related deaths since spring 2009:

24*

The health district is reporting four additional deaths for the week ending November 7. The patients were a six-year-old boy and a 17-year-old boy, both with underlying medical conditions, a 54-year-old woman with underlying medical conditions, and a 54-year-old man. It is unknown whether the adult man had underlying medical conditions. Currently, there are patients reported hospitalized with severe illness.

As of Friday, November 6, the health district received 78,000 doses of the 2009 H1N1 influenza vaccine. As of Saturday, November 7, the health district administered more than 41,000 doses.

-30-

**This number represents Clark County residents only and is cumulative since 2009 H1N1 influenza was identified in the spring. In early June, the health district reported the death of a hospitalized patient who was a resident of another state.*
