

## Public Health Update – 2009 H1N1 Influenza January 27, 2010

The Southern Nevada Health District reports the following information for the week ending Saturday, January 23, 2010. The report includes cumulative case counts for the 2009-2010 influenza season beginning August 31, 2009.

| Week Ending | Confirmed | Cumulative Cases* |
|-------------|-----------|-------------------|
| January 23  | 5         | 3452              |
| January 16  | 16        | 3447              |
| January 9   | 10        | 3431              |
| January 2   | 20        | 3421              |
| December 26 | 19        | 3401              |
| December 19 | 40        | 3384              |
| December 12 | 109       | 3343              |
| December 5  | 101       | 3228              |
| November 28 | 62        | 3127              |
| November 21 | 172       | 3065              |
| November 14 | 318       | 2890              |
| November 7  | 623       | 2567              |
| October 31  | 416       | 1940              |
| October 24  | 854       | 1524              |
| October 17  | 361       | 670               |

## Clark County 2009 H1N1-related deaths since spring 2009:

37\*\*

The health district is reporting an additional death for the week ending January 23. The patient is a 77-year-old woman with an underlying medical condition.

The comprehensive weekly surveillance report is posted at: <a href="http://www.southernnevadahealthdistrict.org/download/epi/flu-surveillance-update-012310.pdf">http://www.southernnevadahealthdistrict.org/download/epi/flu-surveillance-update-012310.pdf</a>

To date, the health district has received 157,100 doses of the 2009 H1N1 influenza vaccine, some of which has been distributed to private providers. Approximately 369,000 doses have been delivered to private providers in Clark County by the Nevada State Health Division. The Southern Nevada Health District has administered more than 112,600 doses since October.

\*Cumulative totals may not add up to the current week total plus the cumulative total from the previous week, as cases from previous weeks can be reclassified from influenza to novel H1N1 based on new lab results, and duplicates are identified and removed.

\*\*This number represents Clark County residents only and is cumulative since 2009 H1N1 influenza was identified in the spring. In early June, the health district reported the death of a hospitalized patient who was a resident of another state.
