

Southern Nevada Weekly Influenza Surveillance Snapshot CDC Week 47, November 19 - 25, 2017

Summary: Influenza surveillance for Clark County, Nevada includes data collected from local hospital emergency rooms, healthcare providers and laboratories. While seasonal influenza (flu) viruses can be detected year-round, flu viruses are most common during the fall and winter. The first official date of the 2017-2018 influenza season was October 1, 2017. As of November 25, 2017, the total number of confirmed cases of influenza during the season was 136. The percentage of emergency room (ER) visits for Influenza-like Illness (ILI) increased from 2.1% in week 46 to 2.6% in week 47. Approximately 36% of ER visits for ILI were children of 0-4 years of age. Influenza A was the dominant type circulating locally. One influenza-associated pediatric death occurred this season. Southern Nevada Health District will continue to update the public on the progression of the season and encourage the population to get vaccinated.

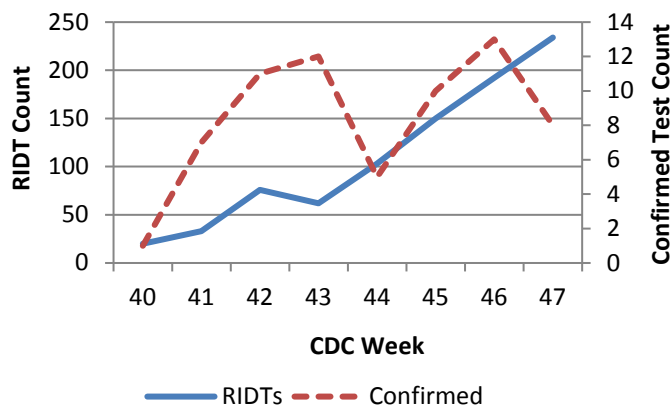

Table 1: Influenza Report by Age Group, Clark County, NV (CDC Week 40, 2017 to Week 47, 2017)

Age Group	Deaths	Hospitalizations	Confirmed Cases*
0-4	1	3	3
05-24	0	5	11
25-49	0	15	20
50-64	0	22	26
65+	0	71	76
Total	1	116	136

Table 2: Influenza Report by Virus Strain, Clark County, NV (CDC week 40, 2017 to Week 47, 2017)

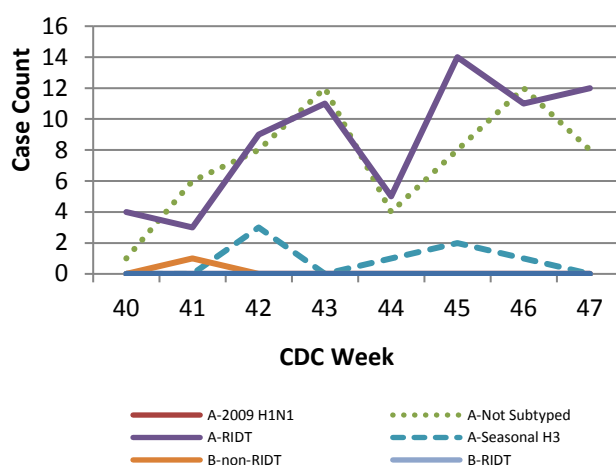

Influenza Type	Deaths	Hospitalizations	Confirmed Cases*
Influenza A (2009 H1N1)	0	0	0
Influenza A (not sub-typed)	0	43	59
Influenza A (RIDT)	0	69	69
Influenza A (seasonal H3)	1	4	7
Influenza B (non-RIDT)	0	0	1
Influenza B (RIDT)	0	0	0
Influenza (unknown type, RIDT)	0	0	0
Total	1	116	136
