

## Southern Nevada Weekly Influenza Surveillance Snapshot CDC Week 50, December 10 – December 16, 2017

**Summary:** Influenza surveillance for Clark County, Nevada includes data collected from local hospital emergency rooms, healthcare providers and laboratories. While seasonal influenza (flu) viruses can be detected year-round, flu viruses are most common during the fall and winter. The first official date of the 2017-2018 influenza season was October 1, 2017. Nationally, the overall influenza activity has sharply increased. Locally, as of December 16, 2017, the total number of confirmed cases of influenza during the season was 252 and the percentage of emergency room (ER) visits for Influenza-like Illness (ILI) increased from 3.2% in week 49 to 4.1% in week 50. Approximately 35% of area ER visits for ILI were children of 0-4 years of age. Influenza A was the dominant type circulating. Five influenza-associated deaths occurred this season in Clark County. Southern Nevada Health District will continue to update the public on the progression of the season and encourage the population to get vaccinated.

**Table 1: Influenza Report by Age Group, Clark County, NV (CDC Week 40, 2017 to Week 50, 2017)**

Age Group	Deaths	Hospitalizations	Confirmed Cases*
0-4	1	7	8
5-17	1	4	12
18-24	0	9	11
25-49	0	31	37
50-64	0	48	54
65+	3	117	130
<b>Total</b>	<b>5</b>	<b>216</b>	<b>252</b>

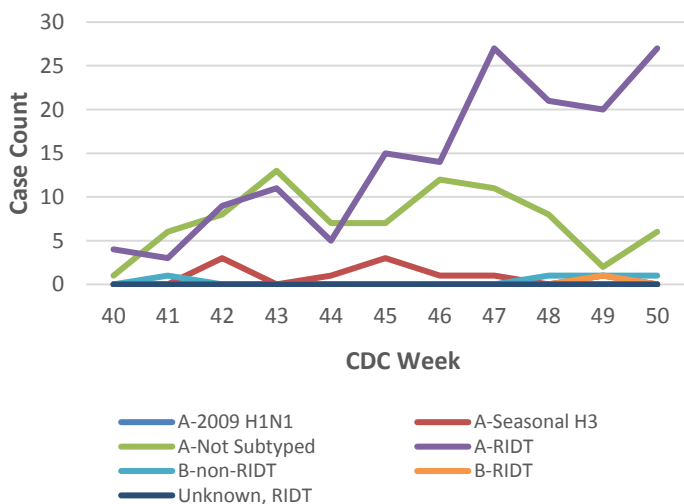

**Table 2: Influenza Report by Virus Strain, Clark County, NV (CDC week 40, 2017 to Week 50, 2017)**

Influenza Type	Deaths	Hospitalizations	Confirmed Cases*
Influenza A (2009 H1N1)	0	0	0
Influenza A (seasonal H3)	1	5	10
Influenza A (not sub-typed)	1	53	81
Influenza A (RIDT)	3	156	156
Influenza B (non-RIDT)	0	1	4
Influenza B (RIDT)	0	1	1
Influenza (unknown type, RIDT)	0	0	0
<b>Total</b>	<b>5</b>	<b>216</b>	<b>252</b>
