

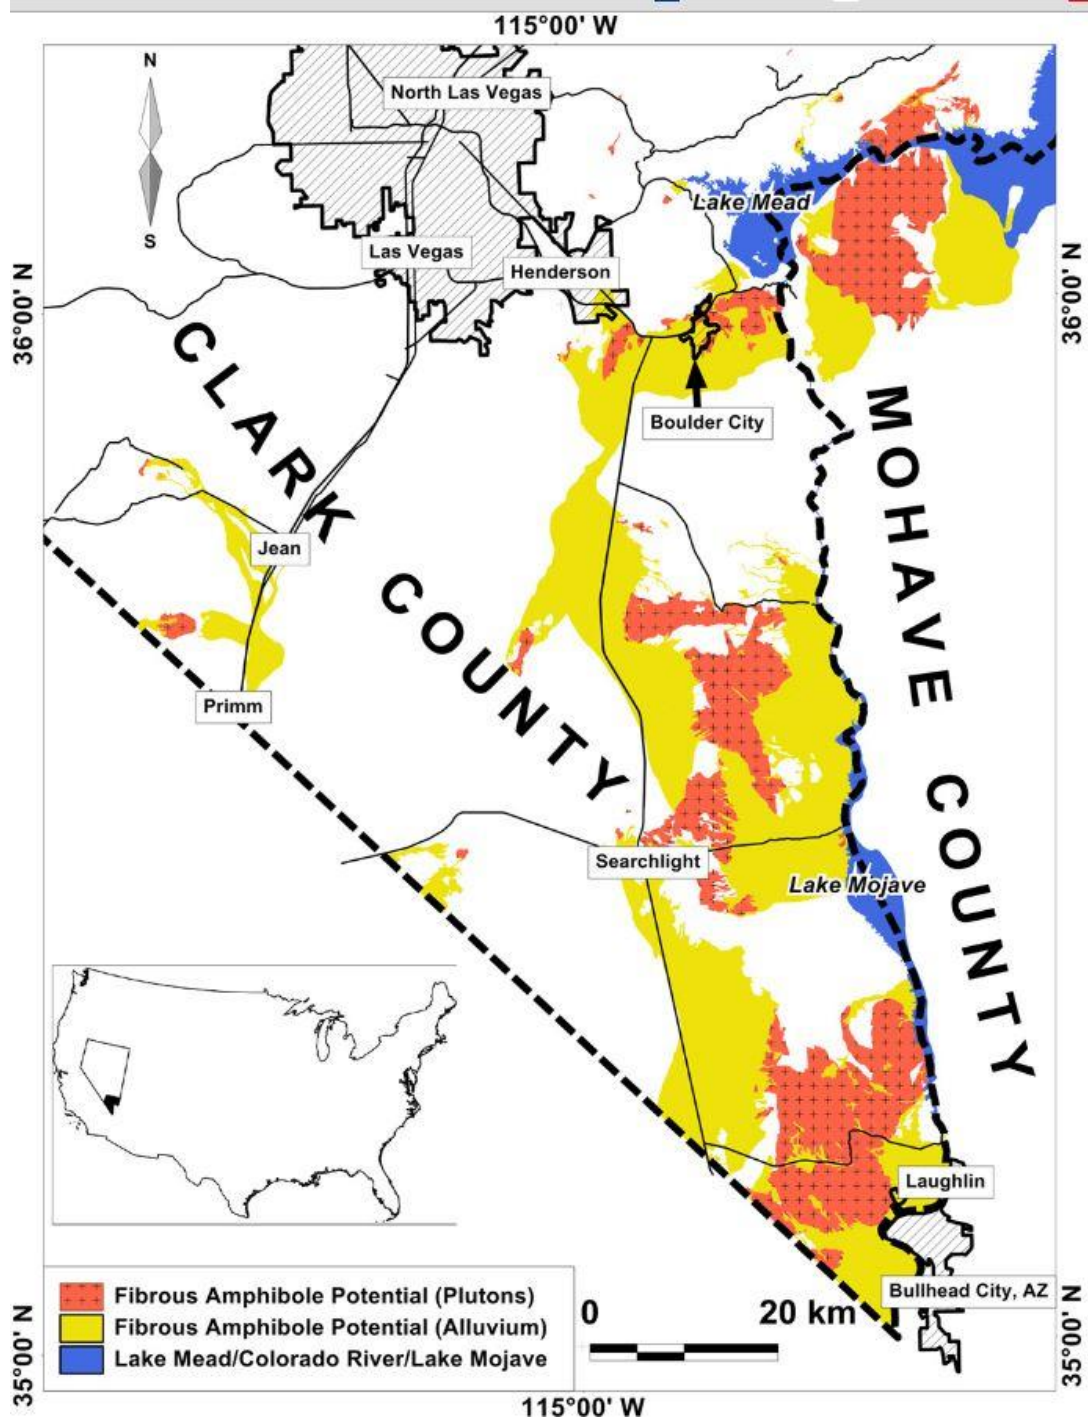

Fig 1: Predicted potential occurrence of fibrous amphiboles in Clark County, Nevada, and an area of adjacent Mohave County, Arizona, south of Lake Mead. Plutons are Miocene in age; alluvium includes deposits of Miocene to Quaternary age. Only a small portion of these mapped areas has been examined.

The above map and Figure 1 description is from the article “Naturally Occurring Asbestos : Potential for Human Exposure, Southern Nevada, USA” authored by Brenda Buck, PhD; Dick Goossens, PhD; Rodney Metcalf, PhD; Brett McLaurin, PhD; and Minghua Ren Frederick Freudenberger, PhD. It was published in the May 2013 edition of the Soil Science Society of America Journal.
