

Pediatric Early Warning Sentinel Surveillance (PEWSS) Weekly Bulletin
Southern Nevada Health District

April 23, 2014

Data through April 19, 2014

Overview

About PEWSS

For the week ending 4/19/2014, the following pathogens were detected with a low volume of testing: Influenza B, Rhinovirus/Enterovirus

For additional information about PEWSS, please contact Linh Nguyen, Ph.D., MPH at the SNHD Office of Epidemiology at 702.759.1299. PEWSS program description, methodology, and weekly bulletins can be viewed at <http://www.southernnevadahealthdistrict.org/stats-reports/influenza.php>

Table 1. Current Testing results

Testing Category	Last Week	Four Weeks	Trend	Comment
Adenovirus	—	High	→	Adenoviruses can cause acute respiratory disease, conjunctivitis, and gastroenteritis
Chlamydomphila pneumoniae	—	—		‡
Coronavirus HKU1	—	—		
Coronavirus NL63	—	—		
Coronavirus 229E	—	Detected*		
Coronavirus OC43	—	Detected*		
Human metapneumovirus	—	Sporadic	→	
Influenza A	—	—		
Influenza B	Detected	Moderate	→	Detected at moderate levels over the past four weeks
Mycoplasma pneumoniae	—	—		
Parainfluenza 1	—	—		
Parainfluenza 2	—	—		
Parainfluenza 3	—	Moderate	→	Detected at moderate levels over the past four weeks
Parainfluenza 4	—	—		‡
Respiratory syncytial virus (RSV)	—	Sporadic	→	
Rhinovirus/Enterovirus	Detected	Detected*		Rhinoviruses and Coronaviruses cause the majority of cold symptoms
Specimen Volume	Low	Low	→	

* Insufficient historical data exists to determine the level of detection

‡ Added to PEWSS in December 2013, has yet to be identified
