

**Overview**

**About PEWSS**

For the week ending 9/20/2014, the following pathogens were detected with a low volume of testing: Parainfluenza 2, RSV, Rhinovirus/Enterovirus. Enterovirus D68 would be detected as part of the Rhinovirus/Enterovirus test, but this test cannot differentiate it from other enteroviruses or rhinovirus.

For additional information about PEWSS, please contact Brian Labus, MPH at the SNHD Office of Epidemiology at 702.759.1299. PEWSS program description, methodology, and weekly bulletins can be viewed at <http://www.southernnevadahealthdistrict.org/stats-reports/influenza.php>

**Table 1. Current Testing results**

Testing Category	Last Week	Four Weeks	Trend	Comment
Adenovirus	—	Detected*		
Chlamydomphila pneumoniae	—	Detected*		
Coronavirus HKU1	—	—		
Coronavirus NL63	—	—		
Coronavirus 229E	—	—		
Coronavirus OC43	—	—		
Human metapneumovirus	—	—		
Influenza A	—	—		
Influenza B	—	—		
Mycoplasma pneumoniae	—	—		
Parainfluenza 1	—	—		
Parainfluenza 2	Detected	Detected*		
Parainfluenza 3	—	—		
Parainfluenza 4	—	—		
Respiratory syncytial virus (RSV)	Detected	Low	→	RSV has been detected in one specimen in each of the past two weeks.
Rhinovirus/Enterovirus	Detected	Detected*		Levels have been stable and in the normal range for the past month.
Specimen Volume	Low	Low	→	

\* Insufficient historical data exists to determine the level of detection
